

RAD Dental Devices is an Israeli company developing innovative, user-friendly platform that hopefully will become a standard of care for treatment of alveolar ridge deficiencies and oral soft tissue regeneration.

The company's state-of-the-art solutions are based on the well-known distraction osteogenesis methodology of Dr. Gavriel Ilizarov, one of the world's top recognized and reputable experts within the field.

Supported by a dedicated R&D team alongside a visionary Scientific Advisory Board and a strong business development unit, RAD is well positioned to capture a significant market share through joint ventures and strategic partnerships.
